Datasheet Casing Collar Locator 318 Standard

Casing collar locators (CCLs) provide a rugged, reliable method for depth correlation of any toolstring. As the tool passes a collar or changes in metal volume, the magnetic flux between two separate, permanent magnets within the tool senses a change which is captured. This allows detection of casing collars, hardware and even perforations downhole.

Applications	Features	Benefits
Depth correlation	• Rugged	Accurate depth control
Hardware identification	Reliable	Surface read-out compatible
	 Universal: operates on any e-line via DC 	
	NACE compliant
